Chair's Welcome Message

Welcome to the Smart Digital Futures 2016 (SDF-16) multi-theme conference, held in Puerto de la Cruz, on the island of Tenerife, the Canaries, Spain, on 15-17 June 2016.

SDF-16 is an amalgamation of five KES conferences: Agent and Multi-Agent Systems - Technology and Applications (KES-AMSTA-16), Intelligent Decision Technologies (KES-IDT-16), Intelligent Interactive Multimedia Systems and Services (KES-IIMSS-16), Innovation in Medicine and Healthcare (KES-InMed-16) and Smart Education and e-Learning (KES-SEEL-16). Although the conferences share a common venue, and social programme, each one has its own chair, international programme committee, and proceedings published by Springer-Verlag. Delegates registered for SDF-16 may attend sessions from any of the conferences and mix with the communities of the others.

Smart Digital Futures was organised as part of the KES International conference portfolio. For over a decade the mission of KES International has been to provide a professional community, networking and publication opportunities for all those who work in knowledge-intensive subjects. At KES we are passionate about the dissemination, transfer, sharing and brokerage of knowledge. The KES community consists of several thousand experts, scientists, academics, engineers, students and practitioners who participate in KES activities. KES runs conferences in different countries of the world on leading edge topics including Intelligent Systems, Sustainability in Energy and Buildings, Innovation, Knowledge Transfer and Enterprise, and Digital Media. KES provides routes to publication, such as journals, book series, and online publications, both through its own media and in conjunction with major publishers. KES also provides knowledge transfer services and consultancy.

The aim of Smart Digital Futures was to bring together researchers working at the leading edge of developments in smart systems and intelligent technology theory and applications. This programme contains about 260 papers, each selected after full peer review by members of the International Programme Committees of the conferences.

We thank the four keynote speakers for providing informative accounts of the latest research in their areas: Jair M. Abe, University of Sao Paulo & Paulista University, Brazil; Antonio Fernández-Caballero, Universidad de Castilla-La Mancha, Spain; Mauro Gatti, IBM, Italy; and Vladimir Uskov, Bradley University, USA

We thank the General Chairs and Programme Chairs of the SDF-16 conferences for their hard work and dedication. We appreciate the efforts of those organising and chairing special sessions, members of the International Programme Committees and

reviewers and we thank them. We are grateful to authors for the papers they have contributed to the conference, and to delegates for their attendance and we give them our thanks.

Finally we thank the conference administration for their organisational efforts, and the people of Puerto de la Cruz for welcoming us to their city.

Social Events

Wednesday 15 June

Excursions

On the evening of Wednesday 15th June, there will be an additional social event. This will feature a guided tour of the beautiful historical town La Laguna followed by a wide selection of drinks and food at a stunning location.

After a short scenic coach drive following the green north coast, we'll discover La Laguna - the former capital of the island!

Its full name is Ciudad de San Cristobal de la Laguna (Saint Christopher). It is the cultural and religious centre of the island, as it is the home of La Laguna University and of the Diocese Nivariense, Tenerife's old name. Its historic centre features well-kept streets and squares, outstanding architectural monuments and traditional houses of the XVII and XVIII centuries. In La Laguna it is possible to

appreciate the beauty of traditional urban Canarian design - the bright arrayed facades with the heavy, double wooden doors and charming balconies with small shops scattered down the narrow streets.

After some free time for exploration on your own, shopping or just a relaxed break at one of the squares... the group meets for delicious food and drinks before we drive back to the hotel.

Subsidised by KES International, tickets for the trip will cost only 30 Euro per person (including drinks / food and a guided tour.)

Thursday 16 June
Conference Dinner

Dinner will take place at MESON EL MONASTERIO.

"El Monasterio" is a rustic style Restaurant full of character, a type of old Canarian estate, dating back to 1646. The venue offers fantastic views over the sea and to the rich green mountainside. Once inside the grounds it is like a small village with a variety of eating areas, magnificent gardens and animals, such as ponies, ducks, hens, roosters and even a very proud peacock, an old press, wine cellars, barrels, carriages and much more!

The conference gala dinner will take place on the evening of Thursday 16 June for those with Full Registration or who have purchased a ticket.

Paraconsistent Logic and its Implication to AI and Technology

Abstract: Non-classical logics have played an important role in AI and Technology. In this talk we present an overview of Paraconsistent Annotated Logic and some its important applications. Roughly such systems allow to deal with imprecise, inconsistent and incomplete systems of information. We show its usefulness in Biomedicine, Automation, Decision-making themes, among others.

Smart Health Environments and Ambient Intelligence at the Service of Emotion Detection and Regulation

Abstract: A health environment is, in general, any location where healthcare is provided. The term usually includes hospitals, clinics, outpatient care centres, and specialised care centres, such as birthing and psychiatric care centres. In this sense, the proper home of a person suffering from some kind of disease, be it physical or mental, can also be considered a health environment. In addition, a smart environment (SmE) is a place that has been enriched with technology (sensors, processors, actuators, and other devices interconnected through a network) to enhance the services provided to humans. A smart health environment (SmHE) can be seen as an extension of a traditional SmE oriented towards offering an enhanced level of health to the patients. Ambient Intelligence (AmI) enhances the global behaviour of such environments by providing high level functionality in terms of sensitivity, adaptability, and responsiveness to human needs, habits, gestures, and emotions.

This talk provides an overview of the speaker's experience on AmI-based emotion detection and regulation in SmHE. In first place, SmHE as envisioned by the speaker's research team should be able to continuously monitor a patient's emotional state by analysing his/her physiological signals, facial expression and overall activities. Then, the system provides the best-tailored actions in the environment to regulate these emotions towards a positive mood through music and colour/light. The talk describes the three main parts of such architecture based on Artificial Intelligence techniques, which are "emotion detection", "emotion regulation" and "emotion feedback control".

Biography: Antonio Fernández-Caballero received his MS degree in Computer Science from Universidad Politécnica de Madrid, Spain, in 1993, and his PhD from the Department of Artificial Intelligence of the Universidad Nacional de Educación a Distancia, Spain, in 2001. He is Full Professor at the Department of Computer Science at Universidad de Castilla-La Mancha. He is the director of the n&aIS (natural and artificial Interaction Systems) research group at the Albacete Research Institute of Informatics. His research interests are

in Artificial Intelligence, Computer Vision, Sensor Fusion, Human-Computer Interaction, and Affective Computing. Antonio Fernández-Caballero is Associate Editor of Pattern Recognition Letters, Topic Editor-in-Chief of International Journal of Advanced Robotic Systems and Specialty-Chief-Editor of Frontiers in Robotics and AI. He has authored more than 300 peer-reviewed papers.

The application of process mining and text mining to the study of the clinical pathway for stroke management

Abstract: Healthcare is important, expensive, complex and produce a huge amount of data. So it is not surprising in the new gold (data) mining era that large companies are investing resources and money to turn healthcare data into information nuggets. Emphasis is on textual and omic data but it is quite likely that it is only from the fusion of different data and methods that value can ultimately be delivered to healthcare stakeholders. IBM has a broad strategy that encompasses areas as different as electronic medical records analysis and histopathological image analysis. Through acquisitions, research and development IBM is developing a broad portfolio in areas as diverse as population health management and clinical decision support systems.

The focus of our team is on combining process and text mining with the ultimate objective of improving the effectiveness of health care. We see hospitals as dynamical systems whose space can be obtained through process mining and whose dynamics can be learned through the combination of data mining and other techniques. However, hospitals are first and foremost social systems. Data can be unreliable, analyses can be undesired, turning analyses into actions can be hindered. Factoring in social aspects from the very beginning is crucial for project success.

In the presentation we shall go through the story of one of the projects we are have been working in the latest year whose goal was to learn from data the clinical stroke process and to spot differences between the expected and real process.

Biography: Mauro Gatti is a member of the IBM Italy Research as a Service team and a certified architect with twenty years of experience in multiple different areas. His current focus is on healthcare notably on the application of analytics to improve healthcare process. He holds a PhD in theoretical physics.

Smart Education: A Synergetic Approach by SDF Community

Abstract: Modern sophisticated smart devices, smart systems, and smart technologies create unique and unprecedented opportunities for academic and training organizations in terms of new approaches to education, learning and teaching strategies, services to on-campus and remote/online students, set-ups of modern classrooms and labs. Resaerch&Markets predicts that the global smart education market to grow at a CAGR of 15.45% during the period 2016-2020. Markets&Markets forecasts the global smart education & learning market to grow from \$105.23 Billion in 2015 to \$446.85 Billion in 2020, at a Compound Annual Growth Rate (CAGR) of 24.4%. Therefore, it is necessary to perform active research and obtain a clear understanding of what main features, components, technologies, software, hardware, pedagogy, faculty, etc. will be required by smart education in the near future. This presentation is focused on smart education, including 1) smart education features (adaptation, sensing (awareness), inferring (logical reasoning, analytics), self-learning, anticipation, and self-organization), 2) smart classrooms of the 1st and 2nd generations, 3) software systems for smart education (Web-lecturing systems, collaborative Web-based communications systems, smart learning analytics systems, etc.), 4) hardware systems for smart education (smart devices, panoramic video cameras, SMART boards, smart card readers, biometric-based access control devices, robotic controllers and actuators, etc.), 5) technologies to support smart education (Internet-of-Things, cloud computing, ambient intelligence, smart agents, Web-lecturing technology, augmented and virtual reality, physical and cyber worlds, wireless sensor networking, context awareness, etc.); 6) smart pedagogy (learning-by-doing, collaborative learning, e-books, learning analytics, adaptive teaching, flipped classrooms, etc.), 7) smart faculty (profile, requirements, "smart technology- faculty" relationship), and 8) cost estimates of smart classroom implementation in a traditional university. It is expected that the outcomes of this presentation will motivate educators-innovators and experts in smart systems, smart technology, smart agent, intelligent decision technologies, smart software and smart hardware areas to work together towards a transformation of traditional education into smart education, and traditional university into a smart university.

KES TRANSACTIONS -- THE KES OPEN ACCESS LIBRARY

KES Transactions is a book series containing the results of applied and theoretical research on a range of leading-edge topics. The series accepts conference proceedings, edited books and research monographs. Papers contained in KES Transactions may also appear in the KES Open Access Library (KOALA), our own online gold standard open access publishing platform.

TRAINING AND SHORT COURSES

KES can provide live and online training courses on all the topics in its portfolio. KES has good relationships with leading universities and academics around the world, and can harness these to provide excellent personal development and training courses.

DISSEMINATION OF RESEARCH RESULTS

It is essential for research groups to communicate the outcomes of their research to those that can make use of them. But academics do not want to run their own conferences. KES has specialist knowledge of how to run a conference to disseminate research results. Or a research project workshop can be run alongside a conference to increase dissemination to an even wider audience.

THE KES-IKT KNOWLEDGE ALLIANCE

KES works in partnership with the Institute of Knowledge Transfer (IKT), the sole accredited body dedicated to supporting and promoting the *knowledge professional*: those individuals involved in innovation, enterprise, and the transfer, sharing and exchange of knowledge. The IKT accredits the quality of innovation and knowledge transfer processes, practices activities, and training providers, and the professional status of its members.

ABOUT KES

Formed in 2001, KES is an independent worldwide association involving about 5000 professionals, engineers, academics, students and managers, operated on a not-for-profit basis, from a base in the UK. A number of universities around the world contribute to its organisation, operation and academic activities.
